

DNA Heroes - GeNFT

Saviors of the World

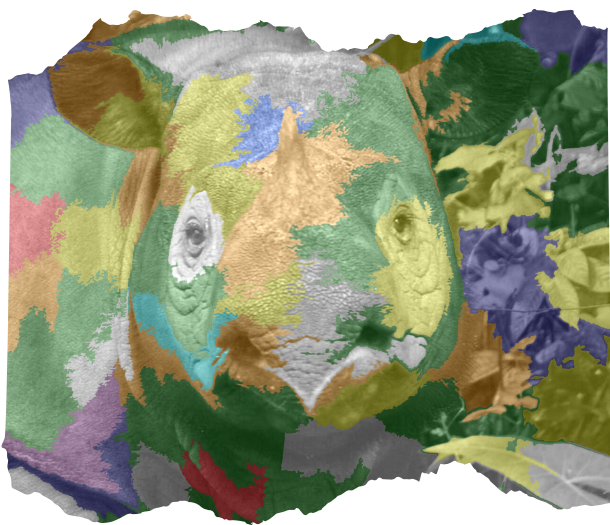

The first ever NFT collection of images and music built with genetic data from endangered species

Sumatran Rhino

1

For our mission of helping all endangered species in the world, we have started by transforming a gene from the Sumatran Rhino into multiple genetic songs and images. You can see genetic images in this infographic and you can also listen a fragment of the rhino genetic song in [YouTube](#)

2

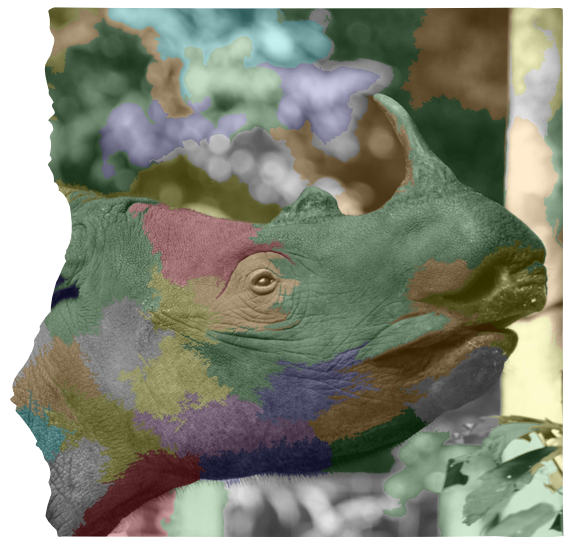

How we want to help?

Genetic images and music, coupled with fables about the species, will be packed as NFTs. A percentage of every sale will go to the protection of the corresponding species. In this first part of our "DNA Heroes" NFT collection, money will help Sumatran Rhinos

What are we looking for?

3

Partnerships with people and organizations wishing to protect endangered species or willing to contribute to their protection !!

4

What's next?

Our "DNA Heroes" NFT collection will include genetic music, images and fables about other endangered species. A percentage of all sales will go to their protection !!
